

Project 1 – Money Detective

Professional Project Report

Student: Muhammad Waleed-ur-Rehman

AI Tool Used: ChatGPT

1. Problem Statement

Money Detective analyzes historical bank transactions to uncover recurring commitments, forgotten subscriptions, duplicate payments, and spending patterns instead of starting a new budget.

2. Objective

Develop a reusable Python solution that can be executed every month on a fresh bank statement and provide actionable financial insights.

3. AI Workflow

The project followed a client-not-coder approach. Requirements were described in natural language, AI generated the Python script, improvements were requested through prompt iterations, and the final output was verified manually.

4. Verification

Manual calculations confirmed total inflows of 6,420.00, total outflows of 3,442.85, and a net movement of 2,977.15. Opening balance (8,500.00) plus net movement exactly matched the closing balance (11,477.15), producing a reconciliation difference of 0.00.

5. Key Findings

Six recurring or contract-like charges totaling 969.00 were detected: DEWA Electricity (310.00), du Home Fibre (299.00), Fitness First (250.00), Etisalat Mobile Top-up (50.00), Netflix (35.00), and Bank Service Charges (25.00). No duplicate transactions were detected. Three Careem rides totaling 145.00 were identified as a repeated spending pattern.

6. Challenges

Only one month of transactions was available, so recurring payments were flagged as review candidates rather than confirmed subscriptions. Transaction descriptions also varied in format, and the statement contained inconsistent AED/PKR column labels.

7. Learning Outcome

The project demonstrated that AI-generated code becomes trustworthy only after reconciliation against known figures. Once validated, the solution becomes a reusable monthly financial review tool.

Verification Summary

Metric	Value
--------	-------

Total Inflows	6,420.00
Total Outflows	3,442.85
Net Movement	2,977.15
Opening Balance	8,500.00
Closing Balance	11,477.15
Reconciliation Difference	0.00
Recurring Review Charges	969.00
Duplicate Charges	0

Conclusion

The Money Detective solution successfully transformed raw banking data into meaningful financial insights. All reported totals were independently verified, making the analysis reliable and suitable for monthly reuse.
